- He was on site at the sink and said the cleanup continues. Estimated they were 75% complete.
  - Only recent complaint he's heard from community is the lack of urgency on Texas Brine's part. What prompted this was they shut down the cleanup last weekend, but the locals continued to be working. State communication and coordination is good.
  - Odor doing better because of north winds.
  - Periodic minor collapse and gas bubbling continues as expected. Some video on their website <http://assumptionla.wordpress.com/> along with updates.
  - He reported industry effort to evaluate and log gas in wells on their sites was completed by Rattigan, and no significant gas accumulations found. Gas appears to be limited to West edge of dome and extends west and north.
  - Texas Brine is now referring invoices from the Parish to their attorneys.
  - Public meetings are continuing, but every two weeks because of rate of new info coming in.
  - John expressed a need for assuring the public the rest of the caverns in the dome have no problems. He believes Rattigan is in the process of doing this.
  - He says they are using ICS system. Mentioned an IA plan every day, collection of all activities daily and include in IAP. He is the Incident Commander.
- Spoke with LDNR rep but nothing new to report.
